

Anti-Mullerian Hormone (AMH), Female

Test ID: 37227

CPT: 83520

Clinical Significance:

Anti-Mullerian Hormone (AMH), Female - AMH-MIS may be used in the investigation of ovarian reserve since AMH concentrations in adult women reflect the number of small antral and preantral follicles entering the growth phase of their life cycle. These follicles are proportional to the number of primordial follicles that still remain in the ovary, or the ovarian reserve. AMH decreases throughout a woman's reproductive life, which reflects the continuous decline of the oocyte/follicle pool with age and, accordingly, ovarian aging.

Profile Components:

Labtech Diagnostics

Container:

Plastic transport tube

Transport Temperature:

Refrigerated (cold packs)

Specimen:

0.5 mL serum

Specimen Stability:

Room temperature: 24 hours
Refrigerated: 6 days
Frozen: 28 days

Reject Criteria:

Hemolysis, Lipemia, Received
room temperature

Days Performed:

Monday through Friday AM shift
Turn Around Time: 1-2 Business
Days

Collection Instructions:

Separate serum/plasma from the cells within 2 hours of collection, ship in a plastic leak-proof container refrigerated or frozen.
